Wisej.NET Powers Smart Home and Document Management Software

Sophisticated Logic (S-Logic) uses Wisej.NET to develop Smart Home and document management software, managing over 16 million documents for clients.

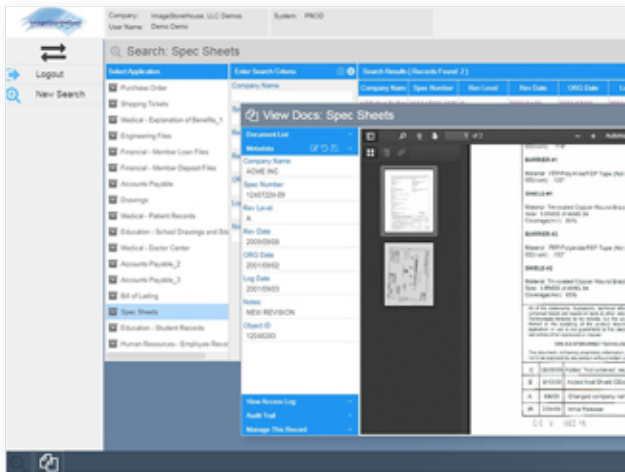

S-Logic's sister company, ImageStoreHouse, decided it was time for an upgrade on an old Java Server Pages (JSP) application. Seeing how Visual Web GUI wasn't a sustainable option anymore, they did some research and discovered Wisej.NET.

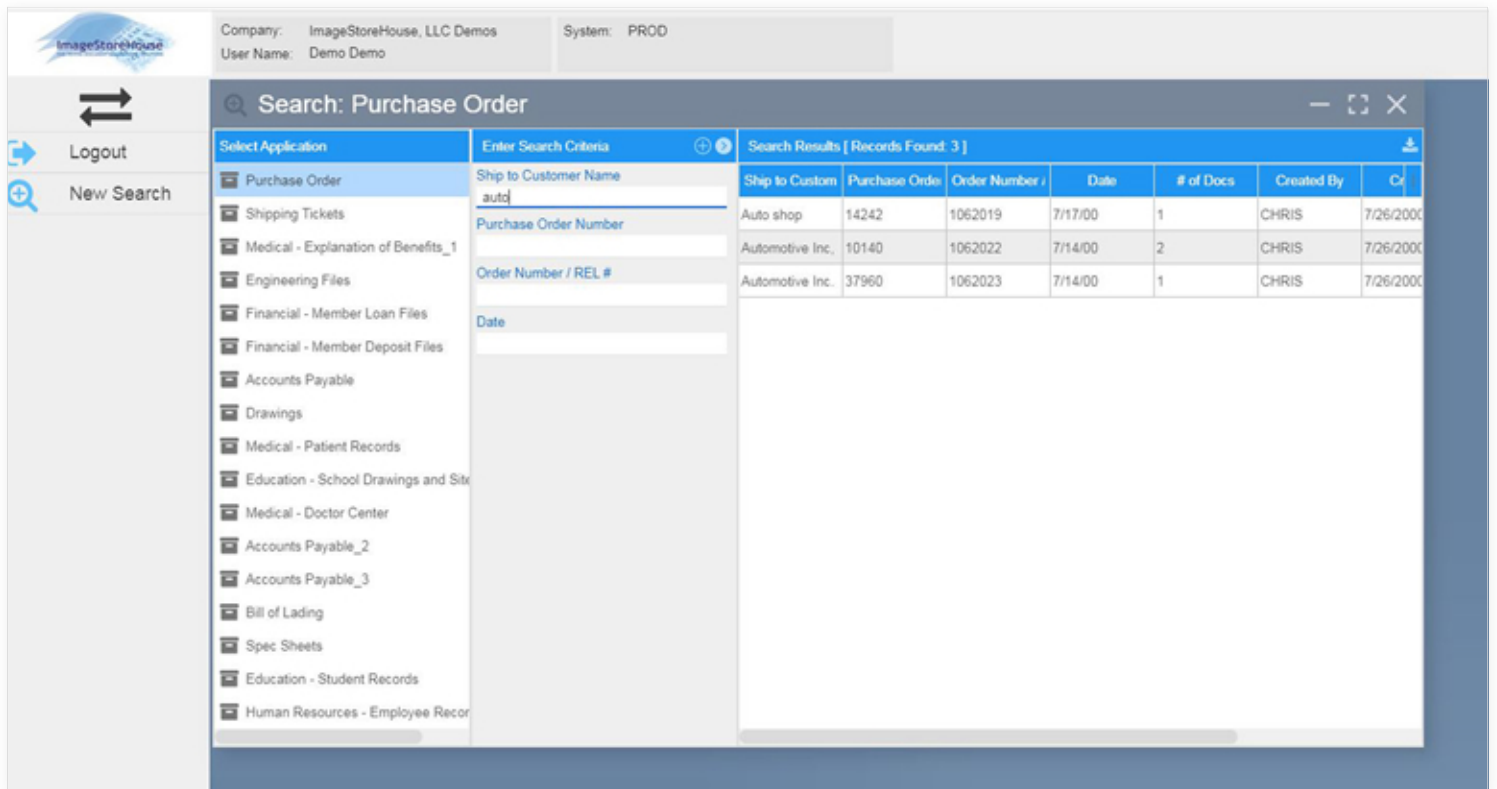

"We came from VisualWebGui and had about 12 applications we created and still support for various customers. We felt VisualWebGui was the way to go for LOB applications and migrated over to Wisej.NET. Of course Wisej.NET is light years ahead of where VisualWebGui left off-which brings us to even more possibilities.". Wisej.NET had everything they were looking for and more in a web framework.

Core Benefits of Wisej.NET.

"Old School Debugging": Full Stack Development Environment

Wisej.NET's familiar debugging in Visual Studio was a warm welcome to S-Logic's development team. When asked what their favorite thing about Wisej.NET is, S-Logic didn't hesitate, "The best thing about it is -well -we can create just about any web/browser-based application with just one tool, Visual Studio."

Set your breakpoints anywhere in the code. Use Visual Studio to debug server-side C# / VB code and the browser's developer console to debug client-side JavaScript code. The client and server components are always kept in sync, allowing for a consistent workflow throughout the application.

Simpler than "TAngular"

When working with Angular, developers know the struggle it can be to build applications with complex forms. "I've been on several Angular projects and we code named it 'Tangular' because of the complexity of debugging and design."

Wisej.NET uses a powerful theming system that allows each control to have a custom look and feel without touching HTML or CSS. The theming system works in real-time in the browser, so it's easy to test theme changes to applications running in production. The Pixel-Perfect WYSIWIG Designer in Visual Studio makes it easy to add hundreds of controls to a form and wire the events to the appropriate C# or VB.NET handlers.

Results Achieved

- Simple Design and Debugging.
- Rapid Development and Prototyping.
- Powerful Full-Stack Development Environment.

The screenshot displays the S-Logic software interface. At the top left, the S-Logic logo is visible. The user is logged in as 'TPortal Admin' on the 'PROD' system. The main window is titled 'Batch Status' and contains a search criteria section with fields for 'Batch Name', 'Add Date', 'Status', and 'Metadata'. Below this is a table listing various batches with columns for 'Batchid', 'Batch Name', 'Status', 'Add Date', 'Add By', and 'Action'. A detailed view for 'Batch # 20200207' is open on the right, showing 'Batch Name: 20200207', 'Date Created: 02/07/2020', and 'Status: Complete'. This view includes a 'Hearings' section with a table of hearing details, including 'Hearing Title', 'Total Duration', 'Notes', 'File Number', 'Hearing Officer', and 'Audio Recording'.
