

# Gupta Team Developer to Visual Studio .NET Desktop or Web

Speed, Reliability, Look & Feel, Superior Productivity, Distributed and Real Time Web Applications are only some of the incredible benefits that you get by switching from a dated technology to a modern platform preserving your valuable software.

# Modern tools set your ideas free!

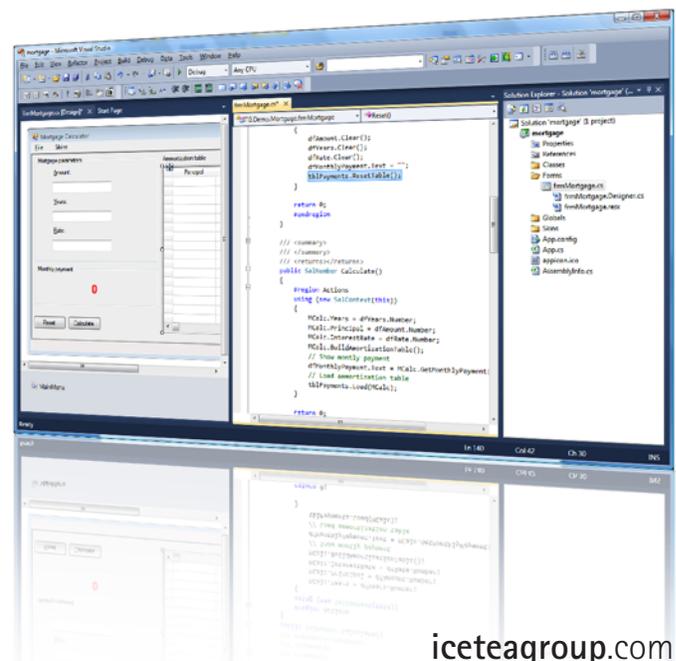

## Visual Studio

Visual Studio is the most used Integrated Development Environment (IDE) in the world, and not just because it's Microsoft. Its flexibility, ease-of-use, reliability, speed, countless tools for developers and managers make it a pleasure to work with.

You deserve no less!

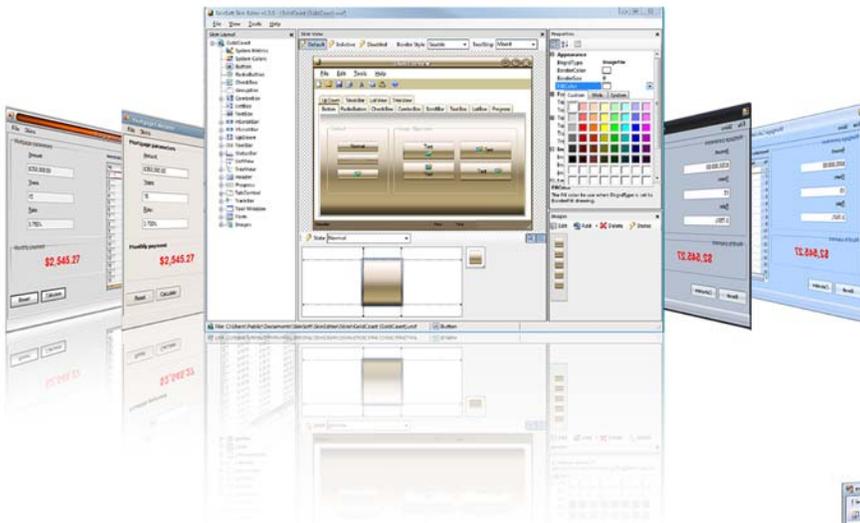

## Work in a modern language: C# or VB.NET

We are in the 21st century. Working with a modern language and tools is fundamental for the success of any software project, just like using power tools is a no-brainer for any construction worker.

## Powerful Skin Engine with Skin Editor

A modern and personalized User Interface (UI) is an expression of strength. Our integrated and comprehensive skinning system allows migrated Unify/Gupta applications to achieve the impossible.

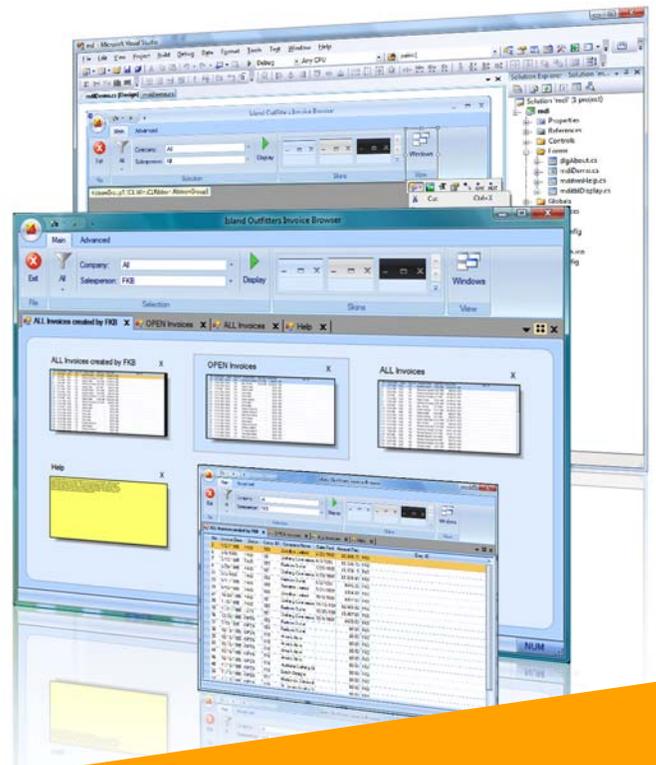

- Advanced skin designer
- Support for all Windows controls
- Support for all Common Controls
- Support for all Visual Toolchest controls
- Support for all System Dialogs
- Import any standard skin file using Microsoft's format

## Modern Look & Feel

With the flip of a property you can finally achieve what the "big guys" have been doing for years. Turn your aging User Interface into a modern and streamlined Fluent Interface for a better user experience.

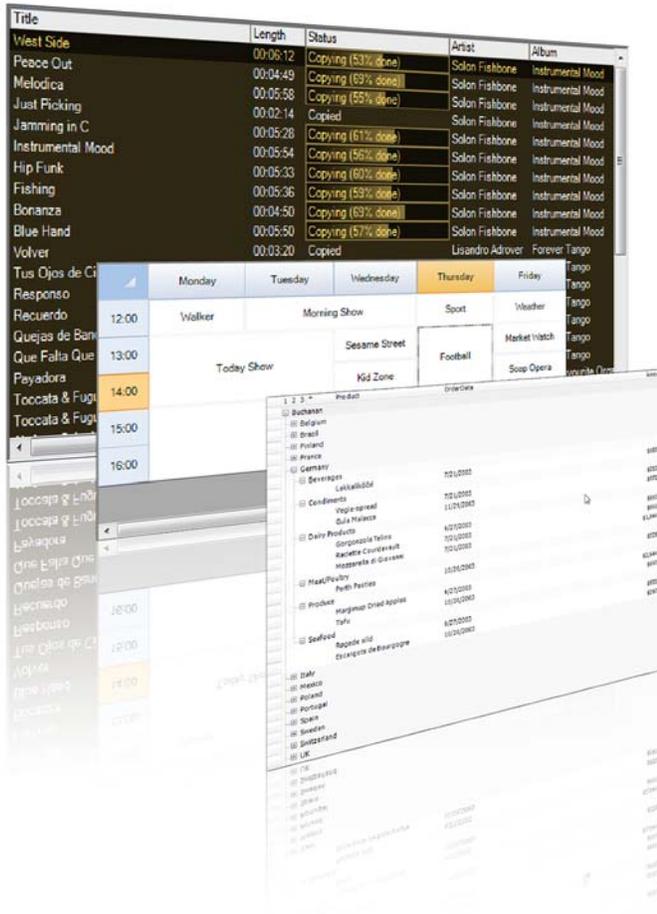

Our innovative Tabbed MDI with Thumbnails, state-of-the-art Ribbon Component and advanced Ribbon Designer give you the powerful features that you need today.

## Solid Grids

Need a real powerful grid? Our solution supports 100% of the functionality found in your current Gupta/Unify application and much more:

- Hidden rows
- Locked columns
- Split rows
- Hierarchical views
- Merged cells
- Images in any cell
- Coloring and custom drawing
- Unlimited rows
- Background loading

## HTML Everywhere

We have extended text controls (labels, buttons, check boxes, grid cells, and tooltips) to support HTML rendering everywhere. Using few simple tags you can enhance your migrated applications in ways that are unthinkable today.

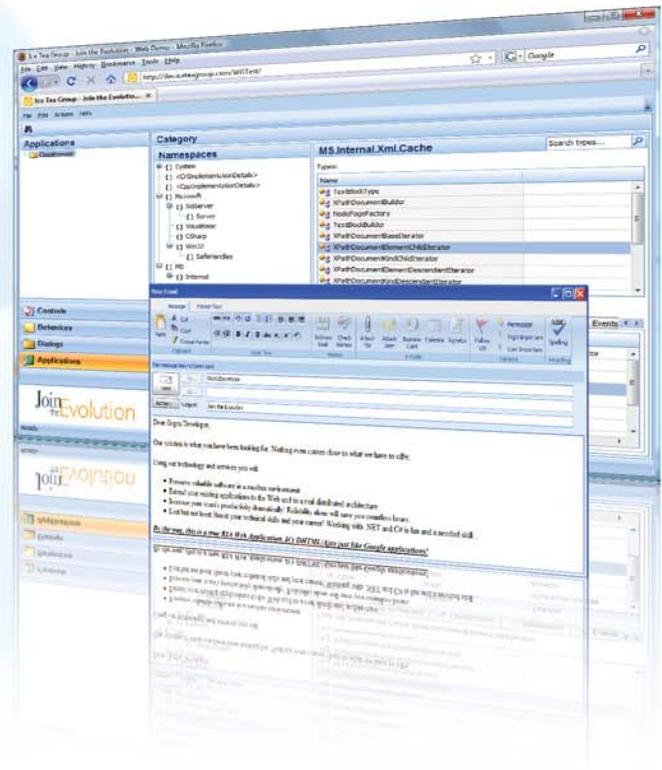

## Migrate to Real Time Web

Using our advanced technology you can run your entire migrated Team Developer application as a Real Time Web Application.

Main Features:

- Cloud Deployment
- Self Hosted or Disconnected
- Secure by Design
- Support all Team Developer Controls
- Cross Platform and Responsive
- Touch Ready for Mobiles and Tables

Contact us and we'll be happy to show you what your applications can do.

## Increase Productivity, Reduce Risk

Stop spending time reinventing the wheel and begging for features that are standard everywhere else. If you have to check that your data has been saved correctly in the database then you have a serious problem with the technology you are using.

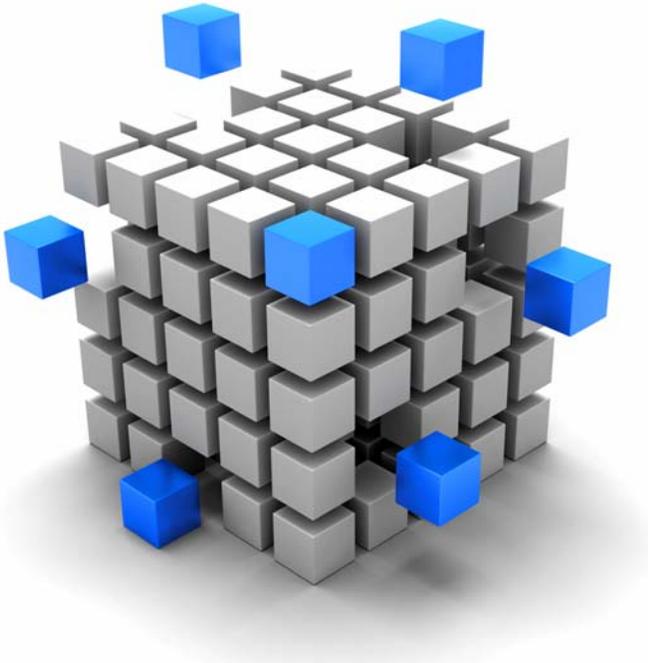

After we convert your Team Developer code to C# or VB.NET, you will have access to the full source code of our migration library, to a large community of developers, and to countless software resources.

## Cloud Deployment

After we migrate your Team Developer applications to .NET and HTML5 solutions, we can also prepare them to be deployed on the cloud. You don't have to worry about clients, libraries, versions and updates anymore.

Your entire Client/Server system can reside entirely in a modern data center, connecting to managed databases and scaling with your requirements.

What was impossible with Team Developer, it is now possible with our migration solutions.

## Agile systems

Tired of large monolithic systems that are hard to deploy and to manage? During (and after) the conversion process we split your system into shared modules.

Real shared and dynamic modules that can be updated and deployed individually and are used by multiple applications.

## Why settle for less?

Contact us and we will help you make the right decision for your team, for your valuable software and for your organization. Our broader focus and unmatched expertise with Gupta software guarantees the future of your systems.

**PPJ Framework**  
• Core and Extended .NET Support

**PPJ Web**  
• Real Time Web Applications

**PPJ Services**  
• Service Oriented Architecture

## Cost?

Less than any alternative, including migrating to the latest Team Developer and staying with SAL, a language designed in the previous century.

## Risk?

**Zero.**

## Questions?

We are available worldwide to answer any question you may have. We can arrange a personalized webinar for you and/or a meeting where we can show you a demo of your application migrated to .NET.
